Summary

Full-Stack Developer skilled in Generative AI, scalable backend systems, and cross-platform applications. Strong in Java, ML integration, and building data-driven solutions for real-world impact.

Experience

Generative AI Intern

Jun–Jul 2025

Prodigy Infotech

- Built 3+ AI mini-projects using Hugging Face Transformers, improving generation efficiency by 20%.
- Applied diffusion models and prompt engineering techniques for optimized outputs.
- Enhanced chatbot workflows reducing manual response effort by 30%.
- Executed model fine-tuning and evaluation experiments to improve output quality.

Technical Skills

- Languages:** Python, C++, Java
- Web:** HTML, CSS, JavaScript, React, Flask, Spring Boot, REST APIs
- Databases:** MySQL, MongoDB, Firebase, Supabase
- AI/ML:** Transformers, Diffusion Models, ML Integration
- Tools:** Git, GitHub, VS Code, LaTeX, Postman, Google Colab, Claude Code, OpenAI Codex

Education

B.Tech in Computer Science

2023–2027

MIT ADT University, Pune

CGPA: 8.23

Relevant: DSA, DBMS, Web Development, Machine Learning, LLMs

Projects

SpeciWise – Scalable Career Recommendation Platform

[GitHub](#)

Tech Stack: React (Vite), React Native (Expo), Java, Spring Boot, Supabase (PostgreSQL), MySQL, JWT, ML

- Engineered a full-stack cross-platform recommendation system using a custom Weighted Interest Scoring Model (WISM) achieving 85% prediction accuracy.
- Designed a multi-stage adaptive assessment pipeline (Domain → Branch → Specialization) improving decision precision and user engagement.
- Built scalable backend architecture using Spring Boot, Supabase (PostgreSQL), MySQL, and Row-Level Security (RLS) for secure access control.
- Applied JWT-based authentication, REST APIs, and event-level analytics to analyze user behavior and reduce drop-offs.
- Enabled cross-device synchronization with persistent sessions and deployed production-ready builds using Vercel and Expo EAS.
- Research paper based on the recommendation methodology is currently under publication.

Fintrac – Expense Tracking System

[GitHub](#)

Tech Stack: React, Spring Boot, MySQL, JWT

- Engineered a full-stack finance tracker managing 1000+ transactions securely.
- Applied JWT authentication and reduced unauthorized access risks.
- Designed an adaptive budgeting system improving expense tracking efficiency by 25%.
- Built analytics dashboard with real-time insights and reporting.

Certifications & Achievements

- Google IT Automation with Python – Coursera (2024)
- Spring Framework for Java Development – SkillUp
- Winner – Wepitch Startup Competition (2024)
- Selected – Smart India Hackathon 2024 & 2025

Leadership & Activities

- Secretary – GeeksforGeeks Coding Club; led workshops and coding sessions.
- Mentored juniors in Python and DSA.
- Gold Medalist – University Cricket Team.
